

Taner Behmen

St Andrews, Scotland | taner.behmen@gmail.com | +44 7990 631796 | [LinkedIn](#)

Chemistry and Mathematics student who builds production software for a living. I've owned systems end to end at two companies, from the first architecture decision to the client demo, and I'm as comfortable writing backend logic as explaining why it matters to someone who isn't technical.

EDUCATION

University of St Andrews

Chemistry and Mathematics, BSc (Hons) — Dean's List 2023-2024

St Andrews, Fife

Sept 2023 – June 2027

Columbia University Summer Immersion Program

Machine Learning Algorithms

Remote

Jun 2021 – Aug 2021

American School of Warsaw, International Baccalaureate

HL Chemistry, HL Computer Science, HL English

Warsaw, Poland

Sept 2011 – May 2023

EXPERIENCE

Gradient House

AI Engineer

Warsaw, Poland

Jun 2026 – Present

Sole engineer running two concurrent production systems for enterprise clients at a Warsaw AI consultancy, working directly with each client's technical leads from first spec to deployment.

- Own end-to-end delivery on two live client systems, **specification through deployment**, as the only engineer on either build.
- Designed a verification layer that checks every generated figure against a real calculation before it reaches a client, **removing hallucinated numbers** from an AI-driven reporting product.
- Rebuilt client onboarding from bespoke engineering work into a **single configuration file**, backed by 120+ automated tests, cutting new-account setup time close to zero.
- Built a **hybrid search system** (classical text matching plus a fine-tuned semantic model) for an 8,800-item product catalog, lifting lookup accuracy without breaking any previously correct result.
- **Shipped automated chart tooling and production monitoring** for a live client system, giving presentation-ready output and catching a visibility gap before it hit a client.

Together Alone Ventures

Developer

Remote

Jan 2026 – Jun 2026

Sole technical operator at an early-stage startup, owning infrastructure, backend systems, and product delivery alongside the founder.

- **Built the company's first production application** end to end, including its native SDK, backend data models, and APIs.
- **Deployed a 5-agent automation stack** covering outreach, content generation, and operational workflows, replacing manual work across multiple business functions.
- **Caught a silent failure mode** where a production system was reporting false success; rebuilt verification into every automated workflow.
- **Built data pipelines and dashboards** turning raw product data into metrics for investor demos, translating system behaviour into plain-language narratives for non-technical stakeholders.

Bonded

Student Intern, Grant & Investment Researcher

Remote

Jul 2025 – Jan 2026

Worked directly with the CEO on data, fundraising, and go-to-market strategy.

- **Built an investor-intelligence pipeline** (web scraping, OCR, Apollo API enrichment) that identified and prioritised 2,000+ investors for executive outreach.
- **Co-led a hackathon campaign** that placed the team in the top 3% of 12,000 global participants (WCHL 2025).
- **Converted unstructured community data into structured datasets** that shaped product roadmap decisions, and represented the company pitching to VCs and accelerators at London Blockchain Conference and ZebuLive.

LEADERSHIP & ACTIVITIES

Engineering & Technology Society

Head of Aerospace Engineering

St Andrews, Scotland

Dec 2024 – Present

- Lead planning and execution of rocket launch projects and fundraising for the society.

Help4Refugees

President

Warsaw, Poland

Sept 2020 – May 2023

- Delivered 100+ computers to Ukrainian students who fled the war to Warsaw; presented to 30+ stakeholders to secure crowdfunding for donations.

Business Club

Data Scientist

Warsaw, Poland

Feb 2021 – May 2023

- Built a real-time sales analytics dashboard (Streamlit, Pandas) that cut ingredient waste by 18% and boosted off-peak revenue by 23%.

SKILLS

Technical: Python (Pandas, NumPy, Scikit-learn), SQL, backend/API design, Git, cloud infrastructure

Delivery: Client-facing delivery, stakeholder communication, live demos | **Languages:** English, Bosnian/Croatian/Serbian
